

1.	(a)	Heat given out by iron cube = Heat gained by water $0.2 \times 450 \times (T - 33) = 0.6 \times 4200 \times (33 - 25)$ $T = 257 (^{\circ}\text{C})$	2M	
			1A	
				3
	(b)	Some water might become steam (immediately). <u>Or</u> Some water in the cup might splash.	1A	
			1A	
				1
	(c)	It is because some heat is lost to the surroundings through vaporization of water / as latent heat. <u>Or</u> It is because some heat is lost to the surroundings (or polystyrene cup) / The water might not be well stirred, otherwise, the water should have reached a temperature higher than 33°C (i.e. underestimated).	1A	
			1A	
			1A	
			1A	
				2
	(d)	(i) Poor thermal contact between the glass bob of the thermometer and the iron cube.	1A	
				1
			1A	
		(ii) Infra-red (IR) thermometer.		1

2. (a) $m_0 = \text{density} \times \text{volume}$ $= 1.20 \times (1.5 \times 10^{-3})$ $= 1.8 \times 10^{-3} \text{ kg or } 1.8 \text{ g}$	1M 1A	
(b) (i) $p_1 V = n_1 RT$ and $p_2 V = n_2 RT$ As $m_0 \rightarrow 4m_0$, $n_2 = 4n_1$ $\therefore p_2 = \frac{n_2 RT}{V} = \frac{4n_1 RT}{V} = 4p_1 = 4.0 \times 10^5 \text{ Pa (or } 4.0 \text{ atm)}$	1M 1A	
Or $pV = nRT$ $p \propto n$ (as V, R and T are constant) Since $m_0 \rightarrow 4m_0$, thus $n \rightarrow 4n$, p becomes 4 times the original value ($= 1.0 \text{ atm}$), $p = 4.0 \times 10^5 \text{ Pa (or } 4.0 \text{ atm)}$	1M 1A	
(ii) More air molecules hit unit area of surface of wall or bottle / water surface (as $n \rightarrow 4n$ moles of molecules trapped in the same volume), The surface of wall or bottle / water surface is hit more frequently OR rate of change of total momentum, i.e. force, per unit area of wall or bottle / water surface increases, pressure increases.	1A 1A	
(iii) $\Delta F = \text{increase in pressure} \times \text{area}$ $= [(4 - 1) \times 10^5] \times 0.014$ $= 4200 \text{ N}$	1M 1A	error-carried-forward (e.c.f.) from (b)(i)
(c) (i) The pressure force acting on the water results in its change of momentum (a water jet). Magnitude of the force = rate of change of momentum. According to Newton's third law of motion, an equal but opposite force / reaction / thrust acts on the rocket. (According to Newton's second law of motion,) the reaction force causes the rocket to accelerate / move upwards.	1A 1A	
(ii) kinetic energy of (the jet of) water / work done on (the jet of) water	1A	

3. (a)

1A

1

- (b) Mechanical power delivered (for work done against the resistive force)

$$\begin{aligned} P &= Fv \\ &= 17.0 \times 8.0 \\ &= 136 \text{ W} \end{aligned}$$

1A

2

- (c) (i)

velocity / m s^{-1}

2

- (ii) Deceleration: $\left| \frac{0-8}{3.8-2.2} \right| = 5.0 \text{ m s}^{-2}$
Resistive force = 65×5.0
 $= 325 \text{ N}$

1M
1A

e.c.f. from (c)(i)

Alternative method:

$$\text{Braking distance} = \frac{1}{2}(8)(3.8 - 2.2) = 6.4 \text{ m}$$

$$Fs = \frac{1}{2}mv^2 - 0$$

$$F(6.4) = \frac{1}{2}(65)(8)^2$$

$$F = 325 \text{ N}$$

1M
1A

2

- (iii) Total distance travelled after $t = 2.0 \text{ s}$
 $=$ area under the graph from $t = 2.0 \text{ s}$ to $t = 3.8 \text{ s}$
 $= \frac{0.2+1.8}{2} \times 8.0 = 8.0 \text{ m}$

1M/1A

Distance between the bicycle and the obstacle when the bicycle stops = $9 - 8$
 $= 1 \text{ m}$

1M
1A

3

- (d) The padded cushion can increase the contact time of the knee and the ground such that a smaller force acts on the knee.
