|    |       |     | Or Lightning current and magnetic field only exist during lightning.                                                                                                                                                                                                                         | 1A |  |
|    |       |     |                                                                                                                                                                                                                                                                                              | 2  |  |

9. (a)  $(4)n_{\alpha} = 238 - 206 \Rightarrow n_{\alpha} = 8$   
 $(2)n_{\alpha} + (-1)n_{\beta} = 92 - 82 \Rightarrow n_{\beta} = 6$

1A

1A

2

(b) (i)  $N = N_0 \left(\frac{1}{2}\right)^{t/T_{1/2}}$   
 $\frac{3}{5} = \left(\frac{1}{2}\right)^{t/4.5 \times 10^9 \text{ yr}}$

1M

Or  $N = N_0 e^{-\lambda t}$  and  $\lambda = \frac{\ln 2}{T_{1/2}}$

1M

$\therefore t = 3.316 \times 10^9 \text{ years} \approx 3.3 \times 10^9 \text{ years}$

1A

2

- (ii) Answer in (i) is an underestimate.  
 The original number of U-238 atoms should be greater.

1A

$\therefore$  the ratio  $\frac{\text{present number of U-238 atoms}}{\text{original number of U-238 atoms}} = \frac{N_t}{N_0}$  is

Accept 'more U decayed'.

in fact smaller (than  $\frac{3}{5}$ ),

1A

thus longer time should have been elapsed.
